mk-manager	✓	✓	✓	✓	✓
mk-admin	✓	✓	✓	✓	✓

Tool Reference

Products — `products:read` — mk-viewer, mk-sales_rep, mk-warehouse_op, mk-manager, mk-admin

`identify_product`	Free-text search across the product vector store. Find products by name, code, EAN, or any description keyword. Pass a query string and optionally how many results you want.	**Returns** Top N matches — name, SKU (code), EAN, relevance score
`get_product_price`	Look up the exact price of a SKU from a named pricelist (e.g. 'RRP 2026'). Returns net price, VAT percentage, VAT amount, and gross price. On failure, lists all available pricelists.	**Returns** Net price · VAT breakdown · Gross price
`get_product_price lists`	Returns every configured pricelist and its price for a given SKU in one call. Use this to compare RRP vs. wholesale vs. partner pricing or when you don't know which pricelist to use.	**Returns** All pricelists + price per pricelist for the SKU
`list_pricelists`	Lists all pricelist names that exist in MetaKocka (not product-specific). Useful before calling get_product_price when the user hasn't specified a pricelist.	**Returns** Array of pricelist name strings
`get_product_url`	Generates a direct product search URL on patrikinternational.com for a given SKU. Use to give users a clickable link to see the product on the webshop.	**Returns** URL to patrikinternational.com search for that SKU
`get_product_variants`	Returns the parent product and all its variants — every size, colour, and version — with individual SKUs, EANs, and full names. Also includes detailed product descriptions.	**Returns** Parent info + list of variant SKUs, EANs, names

Warehouse — `warehouse:read` — mk-viewer, mk-sales_rep, mk-warehouse_op, mk-manager, mk-admin

get_product_stock	Checks live stock for a single SKU in the configured (or a specified) warehouse. Returns available quantity, reserved amount, and microlocation within the warehouse.	**Returns** Available qty · Reserved qty · Microlocation
get_warehouse_list	Fetches all warehouses configured in MetaKocka — their internal mark (used in orders), display name, address, type, and whether they are active or included in stock aggregates.	**Returns** Warehouse list — mark, name, address, active flag
get_warehouse_stock	Bulk cross-warehouse stock query. Filter by warehouse IDs and/or a comma-separated list of SKUs to get stock levels, reservations, and free amounts across all locations at once.	**Returns** Stock entries per SKU per warehouse — amount, reserved, free

Documents	`documents:read`	mk-viewer, mk-sales_rep, mk-warehouse_op, mk-accountant, mk-manager, mk-admin
search_documents	Search any MetaKocka document type (sales orders, invoices, purchase orders, warehouse docs, complaints, etc.) with rich filters: date range, partner name/email/VAT, status, product SKU, payment status, and more. Returns paginated IDs and document codes.	**Returns** Paginated list of mk_id + count_code (+ status if requested)
get_document	Fetch a single document in full detail by its internal ID, human-readable code (e.g. 'PP-12345'), or buyer reference. Supports all doc types: orders, invoices, delivery notes, packing lists, complaints, work orders, and more. Slim mode returns key fields; full mode returns every raw field.	**Returns** Full document — partner, lines, prices, status, dates, tracking
get_invoice_attachments	Lists all files (PDFs, scans, etc.) attached to a specific invoice or bill. Works for domestic/foreign sales bills, purchase bills, credit notes, and sales orders. Provide either the internal ID or the document code.	**Returns** List of attachment file URLs for the invoice

Partners	`partners:read`	mk-viewer, mk-sales_rep, mk-manager, mk-admin
get_partner	Search MetaKocka partners (customers and suppliers) by any combination of: internal ID, full or partial name, VAT/tax number, email address, or phone number. Optionally include configured discount rules per product category.	**Returns** Matching partners — contact details, addresses, optional discounts

Delivery	`delivery:pricelists:read`	mk-sales_rep, mk-warehouse_op, mk-manager, mk-admin
get_delivery_service_pricelists	Fetches all carrier price lists configured in MetaKocka (e.g. GLS Slovenija, GLS Italy). For each service, returns transport cost, cash-on-delivery cost, return cost, and pricing tiers by package weight bracket.	**Returns** Carrier list — transport / COD / return costs by weight tier

No permission required	`open to all authenticated users`	all roles
discover_document_filters	Returns the exact filter 'type' strings accepted by search_documents for a given doc_type. Call this before searching when you are unsure which filter keys are valid — avoids trial-and-error API errors.	**Returns** Map of doc_type to available filter types and their value format

`get_document_url`	Generates a direct MetaKocka back-office UI link for any document (order, invoice, delivery note, packing list, transfer order, etc.) using its internal mk_id. Paste the URL in a browser to open the document directly.	**Returns** Deep-link URL into the MetaKocka UI

*mk-admin holds **admin:all** — bypasses every permission check on the MCP server. Generated 2026-03-24.*
